Eriez Minerals Flotation Group (EMFG) is a Vancouver based company with a growing portfolio of specialized industrial process equipment. EFG's proprietary equipment includes flotation columns for minerals and liquids, StackCell® high efficiency mechanical flotation cell, Hydrofloat® coarse particle flotation cell, gas injection systems and mineral processing test equipment.

EMFG has offices located in Delta, British Columbia, Erie, PA and Belo Horizonte, Brazil and maintains strategic alliances with well-established and complementary companies throughout North and South America, South-East Asia and Southern Africa.

We are poised to significantly increase our multi-million dollar international business and are inviting applications from highly qualified individuals for the following positions:

Mechanical Engineer

Mechanical Engineer (P. Eng) with 10 – 15 years of diverse experience in mechanical product design and manufacturing. Strong engineering skills and experience in managing multi-functional teams. Must be a well organized, innovative and practical project manager capable of multi-tasking. Must have highly developed communications skills.

Metallurgical Technician

Diploma from technical college and minimum of 5 to 10 years experience. Needs to be a self starter, well-organized and mechanically inclined with strong problem solving skills. Duties will include conducting column flotation test programs at the customer site, commissioning equipment such flotation cells, slurry distributors and mini-pilot plant systems. Strong verbal and written communication skills are required

Instrumentation Technician/Engineer

7 – 10 years of experience in instrumentation and control system design for industrial applications. Knowledge of all the steps necessary to design, build, commission and start-up an industrial facility including P&ID development, instrument & valve sizing, preparation of Loop Drawings and instrument Data Sheets. Experience with modern PLC/HMI's; from specification, hardware design, procurement, programming, startup, commissioning thru technical documentation

Metallurgical /Process Engineer (Technical Sales and Customer Support)

Degree in Mineral Processing or Process Engineering from a recognized university and 5 - 10 years industrial experience and entrepreneurial flair. Hands-on experience with Column flotation is a definite asset. Duties include liaising with a broad range of international customers and agents to determine proper applications for our equipment to suit customer needs, preparation of technical and commercial proposals, planning and overseeing test programs, data analysis and report preparation, making customer presentations and project management. International travel is required. The ability to effectively communicate in other languages is an asset.

Please respond by email to emfg@eriez.com . No telephone enquiries please.

We thank all applicants for their interest in EFG however, only those selected for an interview will be contacted.
